In *Model theory of compact complex manifolds with an automorphism*, we made an error in the statement of Theorem C.2 of Appendix C, the abelian group configuration theorem. In describing the configuration, at the very end of the first paragraph of the statement, we should have said "and any triple which is not on a common line, *and is not the triple* (w,c,y), is independent over M." We erroneously omitted the exception of (w,c,y) in the published version.
